

# How the correct use of the right equipment will enhance your long distance tripod shooting experience

People who participate in shooting competitions constantly want to know how they can perform better. This also sometimes applies to the hunter who needs to pursue accuracy to ensure the animal is not only injured but killed with the first shot. But what can lead to a missed shot, except the shooter himself?

When it comes to long distance shooting, the best advice for shooters and hunters who want to perform better is to use their equipment correctly and optimally, and the use of tripods, in particular, has over the years contributed tremendously towards accuracy in this regard. While many first-time hunters sometimes mistakenly think it is just a matter of aiming and firing, they too are often faced with several challenges out in the hunting field.

The moment the hunter makes that important 'first shot' at an animal, a great responsibility rests on his shoulders to ensure a quick death for his prey. The hunter who does not approach the responsibility with the necessary seriousness should think carefully about his role as a 'modern hunter'.

Large quantities of animal are annually injured due to poor or missed shots. A responsible hunter must always know his limitations in terms of his shooting skills in the hunting field and this knowledge is only gained by regularly practising and responsible actions (application of sound judgment) in the hunting field. Therefore, it is also important to use the right equipment such as the long-distance tripod to ensure accuracy.

Few people shoot accurately from a free-standing position and for long distance competition shooters as well as hunters, it is essential to have the most stable rest as possible. In pre-hunting, it is necessary for the hunter to fire a few practice shots using the tripod, so that he can find a comfortable position that will also work in the hunting field.

Long distance tripod shooting may be a thrilling experience for many and its growing popularity in recent years proves exactly that point. However, accuracy, which is the skill to have your round hit precisely where aimed at your preferred range, is not often acquired if the right gear and equipment are not used.

Accuracy is the most critical aspect of the whole experience, but while accuracy is key for hunters, precision is the main requirement in long-range competitions. While hitting a target at around 1,000 yards during long distance tripod shooting is remarkable, competitors are constantly attempting to reach further distances every year.

Precision rifle, long-and extra-long range (ELR) competitions are amongst the fastest-growing shooting sports across the world and with this comes an array of rifle accessories and shooting gear. No sporting discipline is really the same and some present many different options that can easily empty your pocket if you do not go about the business carefully.

The best plan for those who just started with long distance shooting or even hunting is to find an affordable rifle store where you can purchase a good performance long distance rifle. Gradually buy the minimal accessories you will need and it may be wise to spend your time and money on some training too.

Good instruction is always a great start to any discipline and when it comes to long distance tripod shooting, the same applies. You can search the internet to find a company that provides customers with a choice of quality products to help you achieve the best aim when long-range shooting.

Long distance tripod shooting will require a rifle, a sling and a bag, and obviously a tripod to get the basics down. You may want to look at the carbon OTB tripod kit,

which offers the convenience of standing out of the box. It is made from lightweight carbon fiber and the kit offers everything you will need to get started in long distance tripod shooting.

### About us:

Rauch Precision is a veteran-owned and operated company located in Hondo, Texas. They specialize in accessories for the long-range shooter including reliable and affordable covers for suppressors. The company was founded in 2017 by Paul Butler, a 12-year veteran of the United States Marine Corps. Rauch Precision guarantees to provide quality products and superior training, whether it is to the hunter, PRS competitor, law enforcement or military. They always put the quality of their training above everything else, because when it comes down to the shot, a shooter always reverts to his lowest form of training. You will need the right tools and accessories for your firearm to function properly and successfully and with Rauch Precision, you will find all that you are looking for. You can shop online by visiting their website at <https://www.rauchprecision.com>
